

## **The most beautiful news!**

The uniting of the world peoples is just happening on the principle of that famous partisan slogan:

## ***Death to fascism - freedom to the people!***

Unlike earlier revolutionary movements of this kind in the past, this one does not have, nor will have, its leaders. In fact, if anyone does attempt to proclaim or impose himself as a leader, it will only be a means to usurp or coopt the movement and nothing else.

A resistance movement is needed - one that is based on the individual, that is, an independent action of those who, in spite of all difficulties, manage to preserve the human essence. It is a call for those who do not need any "authority" to tell them what to think or what to do to stand together.

A true human being, by its very essence, does not need any external supervision or control. Controls and supervision are only needed for those who present themselves as human beings but they do not possess the required independent human characteristics.

We are aware that fascism implies the restriction of individuality, human rights and freedoms, with a complete supervision and control by a nonhuman, psycho-pathological minority. This minority then attempts to impose all these restrictions under the guise of various "justifications".

In reality, there are no technologies and ideologies that can enslave us!

After all, we have nothing to lose, and all our actions at the individual level to resist this inhumane minority will benefit all of humanity.

Humanness, conscience, awareness and independence are the basic characteristics of a human being. It is up to us to preserve these valuable criterions we identify as being a human being.
